

Super-Sized GMC Motorhome Wiring Diagrams

We have most years of the GMC Motorhome wiring diagrams immediately available in the 17" wide format. Typical chassis diagrams are at least 72" long, but some are longer than others. Typical living area diagrams are 36" – 48" long.

These diagrams are very readable and easy to handle at the 17" width, but if you prefer a larger magnification we can print them up to 36" wide. Naturally this makes them longer and harder to manage, but everything on the diagram is so large that no one should have any problem reading them. When printed at 36" wide some chassis diagrams are over 10 feet long.

We will take special orders for larger formats up to 36" wide. If you want to wallpaper your shop with wiring diagrams or be able to see them from further away this is the way to go!

These prints are made in black & white on a toner-based plotter. Unlike prints made on an inkjet type plotter, the ink will not run if it gets wet. We have some of the 24" and 36" wide prints on hand, but if the print is not in stock please allow an extra 5-10 days for us to get some printed.

The prints are shipped folded or rolled up in tubes via UPS Ground or the US Postal Service. Shipping for all orders to locations in the Continental US is \$10.00 folded or \$15.00 in a tube, but if you order multiple prints there is no additional charge for shipping. If you need rush shipping or shipping outside of the Continental US please let us know and we will quote the additional shipping charges.

Payment can be made by check or thru Paypal. You can email me at info@midgacomputers.com and I will send you an invoice, or you can send a check with your order to:

Alan Henderson

5797 Houston Rd Suite E

Macon, GA 31216
